

REMARKS

The sequence listing filed herewith is amended as follows:

- In SEQ ID NO: 45, a "c" residue is added at the 3' terminus. Thus, the oligonucleotide described therein has been amended from a 22-mer to a 23-mer.

The amended sequence of the 23-mer is given in the original specification as filed; see page 39, 3rd sequence from the bottom – hABC1-540f. Therefore, the amendment does not add new matter.
